Prodi Teknik Robotika dan Kecerdasan buatan

Politeknik Negeri Batam

$$\sum_{(x=1)}^{(n=\zeta\{s\} \rightarrow \{-8,3275\% \})} \left( \frac{1}{x^n} \right) = \left( \frac{\pi^2}{6} \right)$$

$$((7 \times \pi) - 24) = (-2)$$

$$\pi = \left( 6 \times \left\{ \sum_{(x=1)}^{(n=\zeta\{s\} \rightarrow \{-8,3275\% \})} \left( \frac{1}{x^n} \right) \right\} \right)^{\left( \frac{1}{2} \right)}$$

$$\left( \left( 7 \times \sqrt{ \left( 6 \times \left\{ \sum_{(x=1)}^{(n=\zeta\{s\} \rightarrow \{-8,3275\% \})} \left( \frac{1}{x^n} \right) \right\} \right) } \right) - 24 \right) = (-2)$$

$$\sum_{(x=1)}^{(n=\zeta\{s\}\rightarrow\{-8,3275\%\})} \left(\frac{1}{x^n}\right) = \left(\frac{\left(\frac{22}{7}\right)^2}{6}\right)$$

$$\sum_{(x=1)}^{(n=\zeta\{s\}\rightarrow\{-8,3275\%\})} \left(\frac{1}{x^n}\right) = 1,6462585034013605442176870748299$$
