Politeknik Negeri Batam

$$\sum_{(x = \zeta\{s\} \rightarrow \{-8,3275\% \})} \left(\frac{1}{x^2} \right) = \left(\frac{\pi^2}{6} \right)$$

$$((7 \times \pi) - 24) = (-2)$$

$$\pi = \left(6 \times \left\{ \sum_{(x = \zeta\{s\} \rightarrow \{-8,3275\% \})} \left(\frac{1}{x^2} \right) \right\} \right)^{\left(\frac{1}{2} \right)}$$

$$\left(\left(7 \times \sqrt{6 \times \left\{ \sum_{(x = \zeta\{s\} \rightarrow \{-8,3275\% \})} \left(\frac{1}{x^2} \right) \right\}} \right) - 24 \right) = (-2)$$

$$\sum_{(x = \zeta\{s\} \rightarrow \{-8,3275\%\})} \left(\frac{1}{x^2}\right) = \left(\frac{\left(\frac{22}{7}\right)^2}{6}\right)$$

$$\sum_{(x = \zeta\{s\} \rightarrow \{-8,3275\%\})} \left(\frac{1}{x^2}\right) = 1,6462585034013605442176870748299$$
